GRP SOLUTIONS FOR PIG AND POULTRY STABLES

BRAND OF FRP PANELS ARE PROUDLY SUPPLIED
EXCLUSIVELY & DISTRIBUTED IN AUSTRALIA, PHILIPPINES &
VIETNAM BY YOHAN ENTERPRISES PTY LTD, AUSTRALIA

New! Now Offered with Antibacterial Nano Coating

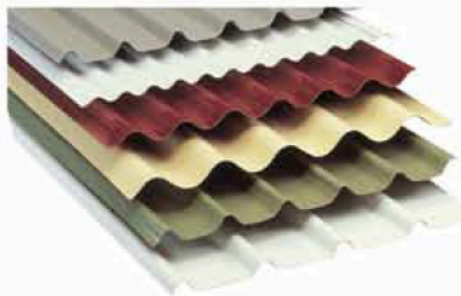

FRIGOSER FLAT & DECOSER EMBOSSED SHEETS AND PANELS

Frigoser & Decoser fiberglass reinforced plastic (GRP) panels are

produced with continuous lamination technology by Polser FRP Panels Inc. They are the new generation building materials which are specially engineered for buildings where weight reduction, minimum maintenance and maximum resistance are required.

Optionally offered with Polser AMB (Antibacterial Coating - Please ask for more information)

DURASER CORRUGATED SHEETS

The main ingredients of Duraser sheets are high quality polyester resins and glassfiber reinforcements which provide high mechanical strength properties to the product. Duraser GRP sheets are modern building products which have many different fields of application. They bring solutions to the projects where classical metal, fiber cement and asbestos based products are not ideally fit for the requirements.

DURAPAN SANDWICH PANELS

Durapan GRP sandwich panels are produced by injection of PU foam in between top and bottom layers of GRP corrugated sheets. The resulting panel is a highly corrosion resistant product with high insulation values. It meets stringent conditions for agricultural roofing and cladding applications.

TRAPEZOIDAL VENTILATION CEILING

The trapezoidal ventilation ceiling is used in large-scale stable buildings for the ventilation purposes. The GRP ceiling sheets are corrosive resistant. Thanks to the ventilation ceilings the fresh air, which flows in via the roof space, is heated and distributed evenly across the entire stable ceiling.

RAIN HOOD

Rain hoods prevent rainwater from penetrating the exhaust air chimney. The hoods are produced with UV stabilised polyester.

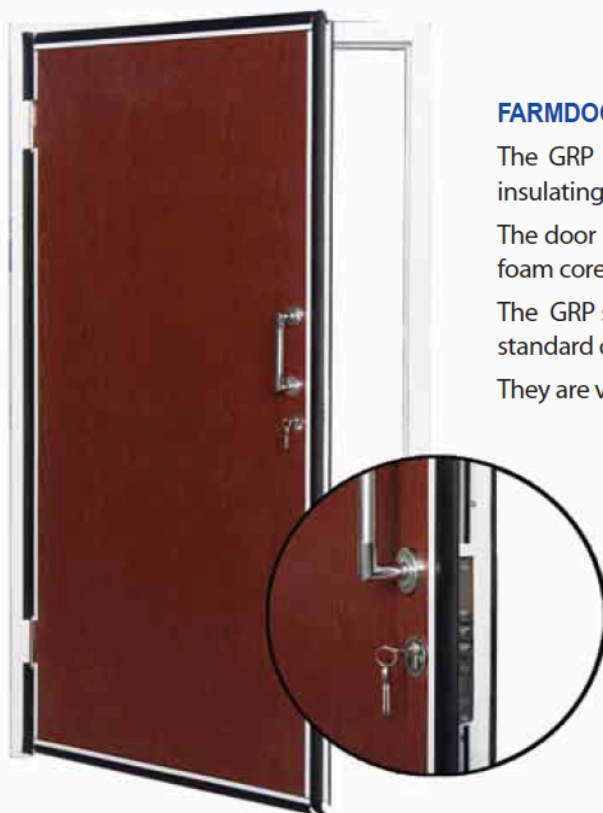

VENTILATION SHAFT

We're able to produce grp agricultural chimneys for the required dimensions.

WATER COLLECTING BASIN

The water collecting basin is recommended for the collection of penetrating water. The basin is fitted beneath the chimney.

FARMDOOR

The GRP Farmdoors are corrosion and damp proof solutions with insulating properties.

The door consists of a impact resistant GRP sheets and an insulating foam core inside.

The GRP surface skins are also scratch-proof and can be produced in standard colors.

They are very easy to clean and maintain.

The GRP skins can be produced smooth and glossy or with a wooden texture.

The wall frame is also made out of GRP and is very strong and durable.

The doors come in a pre-assembled fashion with the metal hardware already installed.

The doors also are optionally produced with an ANTIBACTERIAL COATING that has 99.99% efficacy upon contact against a very broad range of microorganisms.

* While the standard width are 150 mm, 180 mm and 205 mm, project specific dimensions can be produced upon request.

* The doors can be produced optionally with vision glasses.

GRP SOLUTIONS FOR PIG AND POULTRY STABLES

POLSER IS A COMPANY OF CINAR GROUP
YOHAN ENTERPRISES PTY LTD ARE THE ONLY AUTHORISED SUPPLIER FOR
THEIR PRODUCTS IN AUSTRALIA & PHILIPPINES
