Farrowing crate

Blue PVC board farrowing crate

White PVC board farrowing crate

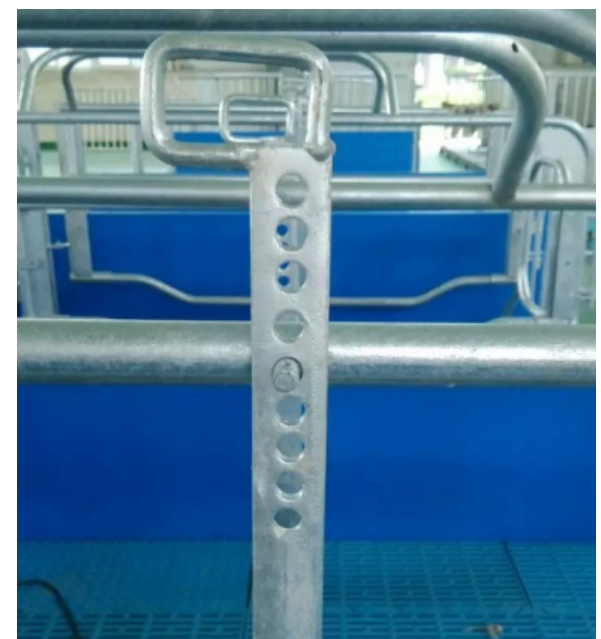

Characteristics of our farrowing crate

1. Stall system

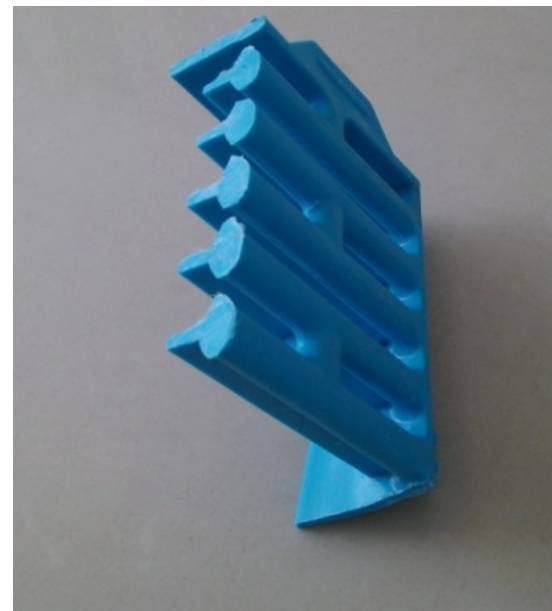

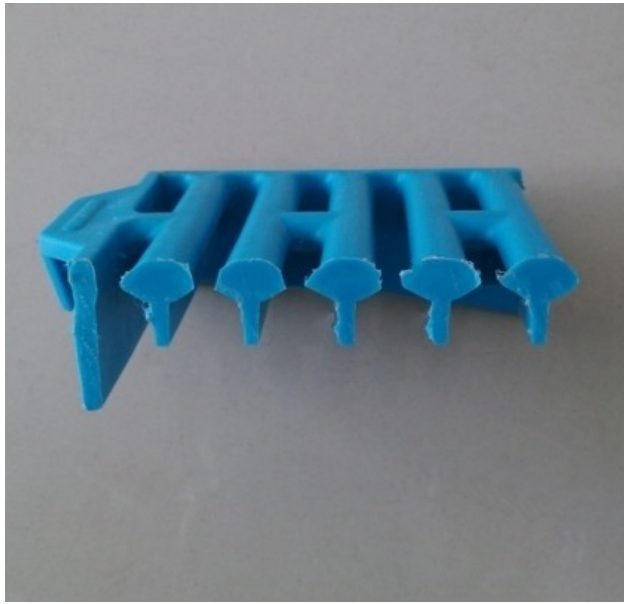

- » adopt overall hot dipped galvanized treatment, which means it is galvanized after the steel pipe is welded.
- » from the pictures you can see small holes in the pipe, which is designed for galvanizing the pipe both inside and outside.
- » this is different from other suppliers. For other suppliers, their stall is directly made by galvanized steel pipe, and then welded together. That leads to welds easily corroded, broken and reduce its service time.
- » our stall is in general corrosion proof, acid and alkali resistant, which can serve a long time.

Adjustable height and width, provide comfortable environment for different sizes of sows.

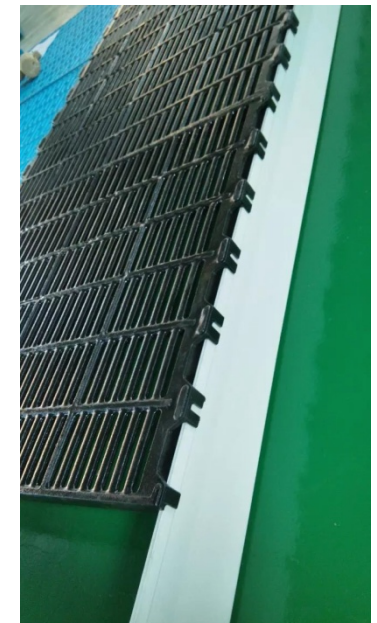

2. Floor system

Cross section view

- » This round section plastic floor is **independent researched and developed by our company**, which uses **high quality PP material** and adopts injection molding.
- » **Better bearing capacity** than flat and arch-shaped floor. Round section floor's bearing capacity is **420kg** while flat's is 260-300kg and arch-shaped is 300-320kg.
- » It has **smooth surface**, which is **easier for dung to leak down** and convenient to **clean the crate thoroughly**.
- » High hardness and toughness, better embrittlement resistance, reasonable design, which all make sure it can serve a long life.
- » **Lower thermal conductivity** far below the steel, which makes the piglets are not easy to catch cold.

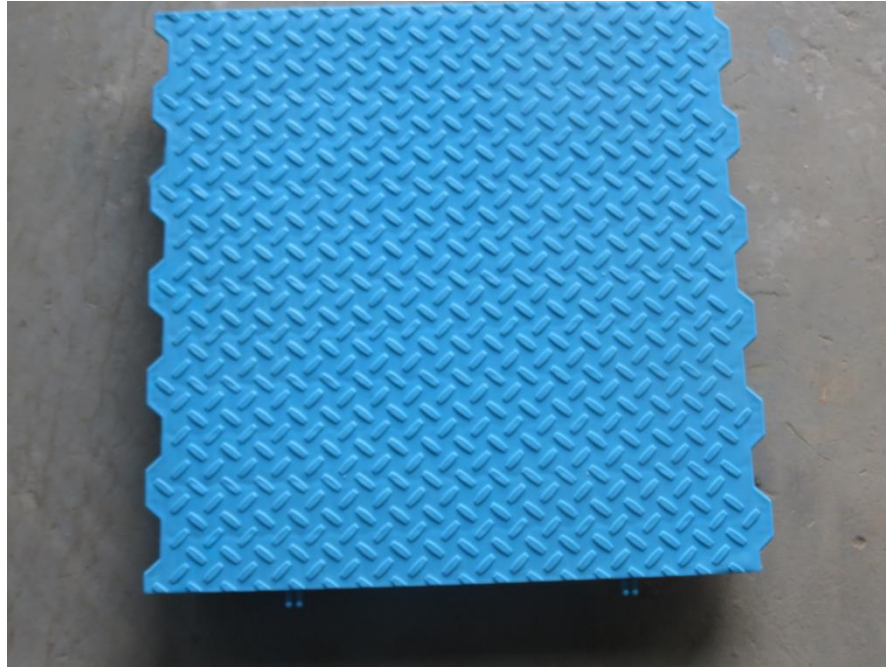

Cast iron floor

- » This ductile round section cast iron floor is new product of our company. Traditional floor's slit width is 5mm, which always clips and injures sow's nipples. So we design **1cm slit width** round section cast iron, which is **smooth without bur** and will not injure sows. This received **great feedback** from our customers.

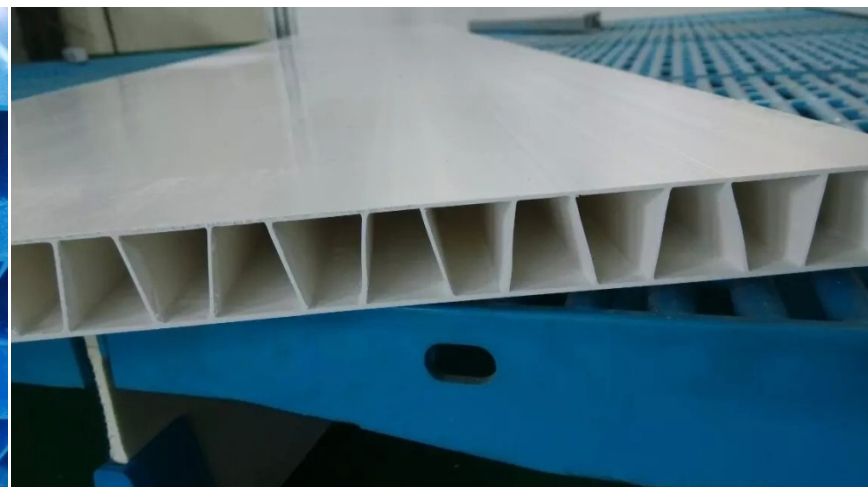

- » Round section is easier for dung to leak down and can be cleaned thoroughly.
- » Anti-corrosion, acid and alkali resistant, which can serve a long time.
- » The bearing capacity is 800kg, strong enough for sows.

Seamless plastic floor

- » It is used for piglets, keep warm for piglets and prevent the waste of piglets' fodder.
- » Its bearing capacity is 420kg, high hardness and toughness, which can serve a long time.
- » Smooth surface will not scratch pigs.

3. PVC fence

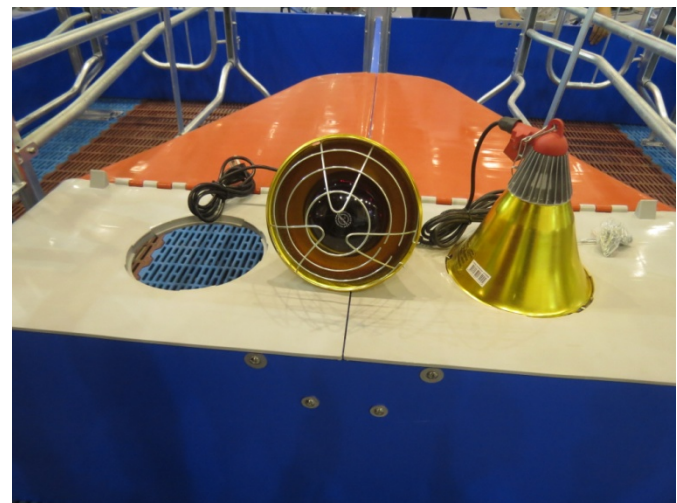

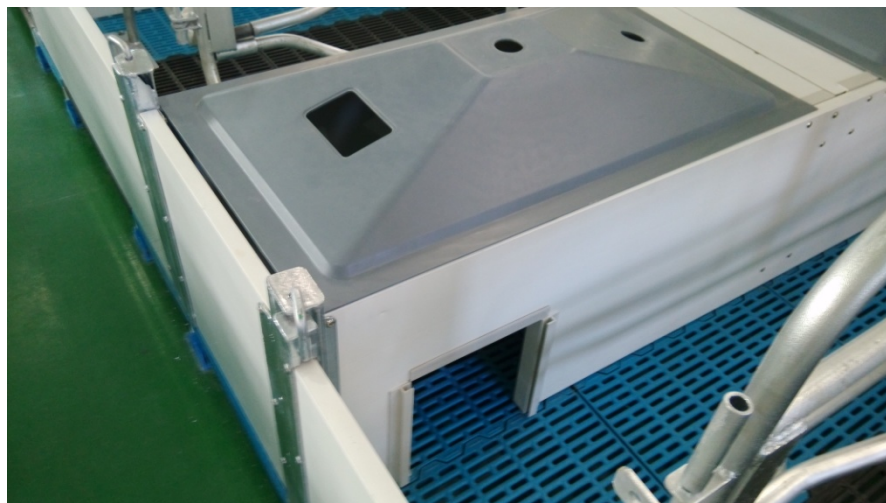

- » This PVC board is a patent product of our principal company (patent No. 2004200006372).
- » Smooth surface without bur, which will not hurt pigs.
- » Great warm-keeping effect, reduce diarrhea rate for piglets.
- » Effective disease isolation, convenient to control the situation.
- » Good mechanical strength, which can serve a long time.
- » Easy to install and clean thoroughly.

4. Stainless trough

- » We adopt SS304 material, anti-rust, anti-corrosion, which keeps the feed clean and healthy.
- » The trough is reversible, which makes it easy to clean.
- » The curled edge will not hurt pig's mouth and reduce the feed waste.

5. Warm box / heating lamp

- » We offer 2 types warm equipment, warm box and heating lamp.
- » The warm box is made of PVC board.
- » The heating lamp is used with warm cover together.
- » You can choose any type you like according to your situation.

6. Main Specifications

Farrowing crate	3.6×2.4m (2 sows) / 1.8×2.4m (1 sow)
Treatment process of stall	Overall hot dipped galvanization after welded
Floor	Plastic floor for piglets, cast iron floor for sow
Trough	Stainless steel
PVC board	30mm×500mm / 35mm×600mm(thickness×height)
Cast iron floor	600×700mm
Plastic floor	600×600mm

7. Our services

Pre-sale service

Free design or suggestion for your project provided by our professional design team, make sure you have a cost-effective, scientific and rational planning.

In-sale service

Produce the products according to your demand.

Fine packaging makes sure the products' safety during transportation and makes efficient utilization of storage space.

Fast delivery makes sure the products arrive timely.

After-sale service

Training about installation if you need.

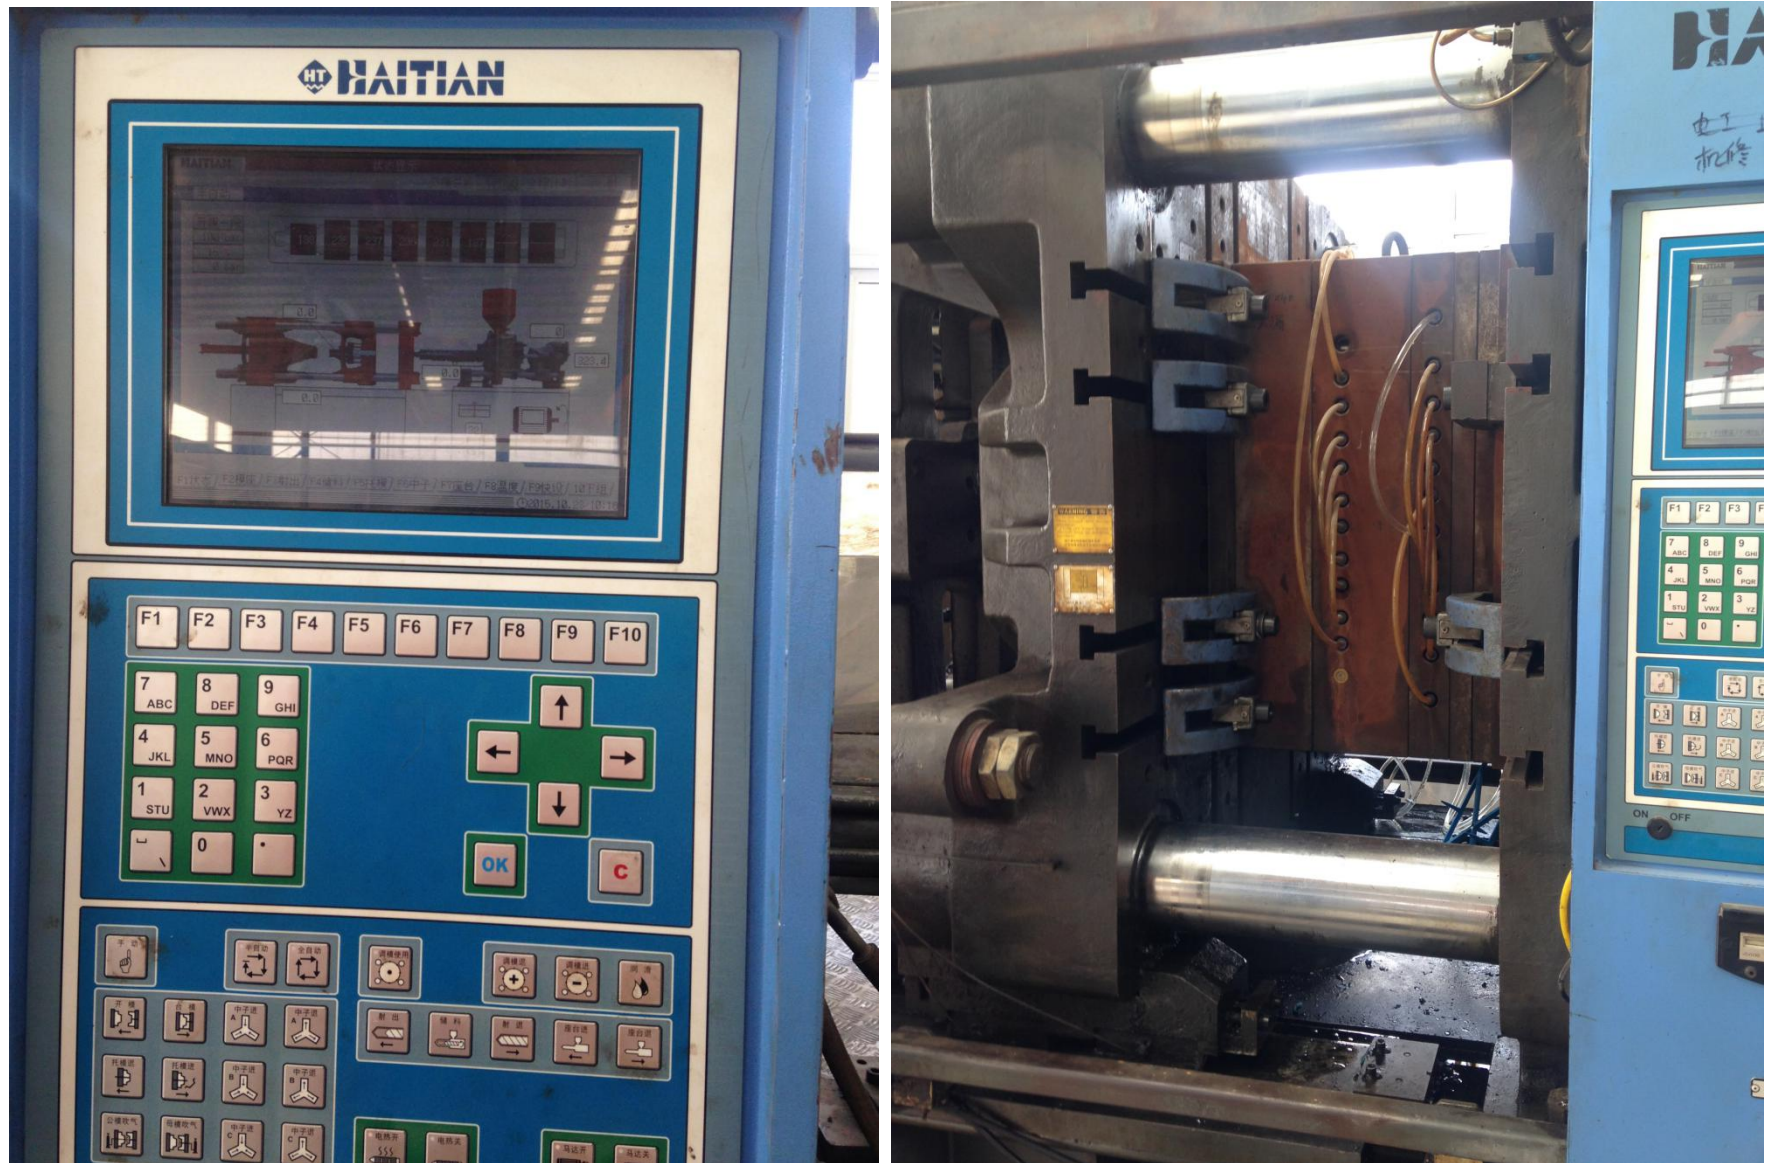

Timely solution to any problems about the products.

Training about breeding process to employees if you need.

Production Machinery
